PROFESSIONAL SUMMARY

Full-stack Software Engineer with 6+ years designing and delivering cloud-native integration platforms, API-first backend services, and enterprise UI components. Shipped reusable service patterns consumed across product teams, hardened security-critical authentication workflows for a HIPAA-adjacent healthcare platform, and modernized a large-scale analytics platform onto AWS. Strong across the full stack -- C#/.NET for high-throughput APIs, Vue.js and Angular for enterprise frontends -- with a focus on clean interface contracts, performance guarantees, and Agile delivery.

CORE COMPETENCIES

API-First Architecture

Cloud-Native / AWS

Microservices & Service Patterns

Security-Adjacent Engineering

Enterprise UI (Vue.js / Angular)

Distributed Data Pipelines

CI/CD & Agile Delivery

Reusable Component Design

WORK EXPERIENCE

Energy Exemplar

Jun 2025 - Mar 2026

Software Engineer — Pune, India (Hybrid)

- Designed and delivered the **Import/Export integration subsystem** for PLEXOS Cloud using C#/.NET, packaging core logic as a **reusable NuGet service library** with a clean interface contract -- adopted by multiple product teams as a shared service pattern.
- Built a **cross-platform CLI tool** on top of the NuGet library, transforming PTI Raw files into SQLite databases and enabling integration workflows without custom scripting per team.
- Developed a **desktop-style Excel Add-In** (Vue.js UI) integrating with the backend library, allowing power users to run advanced data analysis through an enterprise-grade front-end.
- Contributed to the **EE Marketplace** front-end using Vue.js, improving discoverability of energy-modeling extensions for enterprise customers.
- Applied AI-assisted coding (GitHub Copilot, Claude Code) to accelerate delivery, enforce consistent style, and reduce defect rates across sprint cycles.

eGain Communications

Sep 2021 - May 2025

Software Engineer (Professional Engineer) — Pune, India

- Designed and maintained **high-throughput integration APIs** in C#/.NET, optimizing JSON serialization for enterprise-scale data exchange across downstream systems.
- Led the **service-oriented platform modernization** of the analytics layer, migrating from SSAS to **AWS Redshift** -- redesigned data pipelines, refactored data-access layers, and improved query performance by >30%.
- Automated operational workflows using **AWS Lambda, EC2, and Secrets Manager**, embedding unit-level tests and validation scripts to guarantee reliability across asynchronous event flows.
- Produced and customized **SSRS reports** delivering stakeholder-facing insights; championed Agile best practices (CI/CD, peer reviews) that reduced defect leakage by 25%.

Software Developer — Mumbai, India

- **Hardened access control** for the Scribble WFM platform by engineering a **JWT-based authentication module** (Angular + TypeScript), resolving critical security vulnerabilities in document-management services and improving session management.
- Integrated the platform with the **Redox API** for real-time EHR data exchange, enabling secure, structured clinical data flows between external health systems.
- Developed a generic **CSV/Excel bulk-upload integration**, cutting manual data-entry effort by 40% and improving data integrity across operations workflows.
- Designed a performance leaderboard to drive continuous improvement metrics across the operations team.

NOTABLE PROJECTS

Import/Export Service Library & CLI Energy Exemplar

Designed a reusable NuGet service library and cross-platform CLI that packaged core integration logic for PTI Raw file transformation -- enabling multiple product teams to consume the same service pattern without duplication.

C#/.NET, NuGet, SQLite, CLI tooling, Vue.js

Analytics Platform Modernization (SSAS to AWS Redshift) eGain

Led migration of enterprise analytics from a legacy SSAS stack to AWS Redshift. Redesigned ETL pipelines, refactored the data-access layer, and introduced automated validation -- delivering >30% query performance improvement with no data loss.

AWS Redshift, Lambda, EC2, Secrets Manager, C#/.NET, Apache NiFi

JWT Auth Hardening for Healthcare SaaS IKS Health

Resolved critical security vulnerabilities across a HIPAA-adjacent clinical SaaS platform -- engineered JWT authentication, corrected session management flaws, and secured document-management services against access control weaknesses.

Angular, TypeScript, JWT, Redox API, ASP.NET

EDUCATION

Post Graduate Diploma in Advanced Computing — CDAC ACTS, Pune 2020
80.5%

B.Tech, Information Technology — NIT Raipur 2017
CGPA 7.55 / 10

CERTIFICATIONS

Introduction to Cloud Computing
Prompt Engineering -- How to Talk to the AI

SKILLS

Languages	C#, .NET (Core/Framework), TypeScript, JavaScript, HTML, CSS
Frontend	Vue.js, Angular, ASP.NET, responsive UI, enterprise component systems
Backend & APIs	RESTful API design, JSON serialization, NuGet package development, CLI tooling
Cloud & DevOps	AWS (Lambda, EC2, Redshift, Secrets Manager), Azure, GitHub Actions, CI/CD pipelines
Data & Pipelines	MS SQL Server, SQLite, AWS Redshift, Apache NiFi (ETL), SSRS
Security	JWT authentication, session management, access control hardening, OAuth patterns
Tooling	Git, PowerShell, xUnit/NUnit, GitHub Copilot, Claude Code
Methodology	Agile (Scrum), TDD principles, code review, iterative SDLC
